New Framework to Help Asset Owners Prioritize Climate Solutions Investing Options, from the Global Impact Investing Network

The new framework, launched at London Climate Action Week (LCAW), aims to equip asset owners with tools to prioritize the most effective climate solutions investments.

LONDON, June 24, 2025 — Today, the Global Impact Investing Network (GIIN) launched the Climate Solutions Investing Framework, a first-of-its-kind resource designed to help asset owners evaluate and prioritize climate solutions investing strategies that are most likely to bend the emissions curve before we cross critical climate thresholds.

Unveiled during London Climate Action Week, the framework reflects the urgent need for systemic, economy-wide emissions reductions. It is intended to support asset owners and managers in allocating capital to the most effective climate solutions, and is designed to provide practical guidance for navigating the challenges of climate solutions investing. The framework offers a clear set of criteria to identify and prioritize strategies that are most likely to contribute meaningfully to global climate goals.

"Investors seeking to tackle climate change at the scale required must invest in real-world solutions that reduce emissions across the economy," said **Amit Bouri, CEO and co-founder of the GIIN.** "Our Climate Solutions Investing Framework is built to help asset owners channel their capital into the most meaningful opportunities, where it can make the greatest difference for people, planet and portfolios."

Through its investment strategy assessment criteria, the framework supports deeper conversations with managers through targeted questions about the strategy's climate thesis, how it quantifies potential emissions reductions, how it prioritizes among solutions and how it accounts for uncertainty. This moves investors beyond broad climate labels and toward evidence-based decisions about which climate solutions are most aligned with global climate goals.

"The GIIN's Climate Solutions Investing Framework for asset owners provides a helpful and accessible guide on how to allocate capital to where it matters on the ground — delivering economy-wide decarbonization at the scale and pace needed," said **Anne Amanda Bangasser, managing director of Treehouse Investments, LLC.**

"The GIIN's framework provides useful criteria to inform product selection when investing in climate solutions," said **Valentina Ramirez, head of climate strategy implementation at the Institutional Investors Group on Climate Change.** "This complements very well with NZIF's Climate Solutions guidance, which offers a structured approach to identify investors' levers and communicate their contributions across asset classes."

"This framework offers an encompassing structure for institutional investors and family offices to think about how their investments can contribute to limiting climate change," said **Liza Rubinstein Malamud, co-founder and chief climate impact officer at Carbon Equity.** "There is no silver bullet, but this framework gives the broader context and guidance for what matters when developing an investment strategy and what to look for when selecting managers to make informed decisions, hopefully steering more capital to where it will matter most."

With this launch, the GIIN reaffirms its commitment to empowering investors to drive systemic climate progress and shape a sustainable future through intentional capital allocation.

About the Global Impact Investing Network (GIIN): The Global Impact Investing Network (GIIN) is the leading industry body of impact investing, dedicated to increasing the scale and effectiveness of impact investing around the world. Impact investments are investments made into companies, organizations and funds with the intention to generate positive, measurable, social and environmental impact alongside a financial return. Impact investments can be made in both emerging and developed markets and target a range of returns from below market rate to above market rate, depending upon investors' objectives. The GIIN builds critical infrastructure and supports activities, education, and research that help accelerate the development of a coherent impact investing industry.
